

Database Setup Guide

Database Engine

PostgreSQL

Verify PostgreSQL

```
brew services list | grep postgresql
```

Expected:

```
started
```

Start PostgreSQL

```
brew services start postgresql
```

Create Database

```
createdb fintech_db
```

Verify Database

```
psql -l | grep fintech_db
```

Expected:

```
fintech_db
```

Database Connection

Environment Variable:

```
DATABASE_URL=postgresql://ajitbantia@localhost/fintech_db
```

Current Tables

users

User Table

Fields:

- id
 - email
 - phone
 - password_hash
 - role
-

Verify Tables

psql fintech_db

Inside psql:

\dt

Future Tables

users

kyc_documents

loan_applications

loan_offers

loans

repayment_schedules

payments

lenders

investments

audit_logs

Migration Strategy

Current:

Base.metadata.create_all()

Future:

Alembic migrations

Reason:

Production fintech systems require audited schema migrations.
